

## **Evaluation Survey**

1. Do you think it is ok to perform an observation on the same thing more than once?
2. What are the procedural requirements for area postings and signage?
3. How often are you supposed to perform an observation?
4. What are you looking for when you complete an observation?
5. Where do you go in the plant when you are performing an observation?
6. Why is it important to have zones and areas setup correctly?
7. How is contamination controlled and why is it important to control the spread of contamination?
